SYSTEMS CONSOLIDATION & STORAGE MANAGEMENT

Over the years, MIS departments have grown their IT infrastructure along with their business needs. In addition, databases, storage capacities and applications have increased in number, size and complexity. Today, companies realize that they can consolidate and optimize the numerous servers and distributed workloads.

Our server consolidation solutions allow companies to consolidate their IT infrastructure into fewer, more powerful and robust servers. And our storage management solutions aim to help customer achieve optimized performance and resource allocation. We will help customer analyze their needs and work with them to achieve valuable outcome.

We believe the right server consolidation and storage management plan can help you maximize hardware efficiencies, reduce total cost of ownership, and, depending on the size of your company, save you thousands or hundreds of thousands of dollars a year.

HIGH AVAILABILITY

Ensuring the availability and protection of your data and applications is key to the success of your business. Today's on-going business environment allows no chance for server crashes, hard disk malfunctions, cable pulls, storage array failures and human errors.

Our solutions allow business operations to continue to run with a minimum or no break in continuity. Our High Availability solutions running on UNIX and Windows platforms are designed to fit the requirements of your business.

EMAIL MANAGEMENT

Rapidly growing email stores, government regulations, increased corporate liability and ever-increasing litigation disputes are all challenges that organizations face today. Email is a vital corporate asset and must be treated as such. Organizations demand the capabilities to manage, access, and search for specific content, utilizing email as the knowledge asset it has become. Organizations need solutions that intelligently manage information, rather than simply store it.

MANAGED HOSTING

Our Managed Hosting solutions can help you get your business applications up and running quickly and keep them running smoothly. Intended to allow companies to focus resources on their core competencies rather than day-to-day system administration, these solutions deliver a reliable, scalable and flexible e-business environment.

Managed Hosting allows you to acquire business infrastructure as a service over the Internet, and pay for it with a simple monthly fee.

MAINTENANCE SUPPORT

Our maintenance support services team provides the exact level of support you need, according to your operational requirements, internal resources and budget.

Customizable IT Infrastructure & Network Support.

We provide efficient onsite and remote support for servers, desktops, laptops, printers, networking devices, including preventive technical support and professional advice. Beyond this, we also cover your Email, Internet and MS Application. You can be assured that access to your systems will be there when you need it.

Professional AIX System Support (PASS).

PASS is a comprehensive support tailored for AIX systems. Our AIX engineers are dedicated to provide customers with onsite and remote support beyond IBM's standard software maintenance. You can rely on us to manage & support your AIX investments.

Professional Wintel System Support (PSS).

Similar to PASS, wintel System Support (PSS) is also a comprehensive support tailored for systems supporting x86 architecture. Our certified engineers are prompt and armed with the appropriate skillset. You can rely on us to be there when you have a problem.

AIX LEARNING

We are the leading training provider for AIX. Antarius is appointed by Avnet (one of the Global Training Provider – GTP appointed by IBM) as their sole Training Partner (ATP) in Singapore and Asia for UNIX training, providing the full range of IBM Power Systems (AIX on IBM System p and Linux), PureFlex System and System Storage courses.
